RESPONSE TO OFFICE ACTION DATED MARCH 26, 2002

Sir:

Responsive to the Office Action mailed March 14, 2001, kindly enter the following amendments:

IN THE SPECIFICATIONS:

Please replace the paragraph beginning with "A dashed line 112 of Figure 5C ..." at page 13, line 31, with:

A dashed line 112 of Figure 5C represents the transfer curve of the decimation filter 66 in one embodiment. In this embodiment, the low pass decimation filter 66 passes all three signal energies 106, 108 and 110. (For example, each of the signal energies 106, 108 and 110 could be produced by a different transmitting unit.) In this example, none of the signal energies are centered about D.C. In this way, the effects of any D.C. offset in the system and the 1/f noise (denoted by the increase in the spectral noise density curve 113 around zero frequency) can be reduced by follow-on filtering, for example, matched filtering. The spectral noise density curve
